L1	Yue-henry.in.	111	L1

END OF SEARCH HISTORY

Pending Nucleic Acid and/or Pending Amino Acid database searches now generate two sets of results. These databases were split into to two parts to reduce the time needed to update the databases daily. The split freed up more machine time for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions, **.rnpm** and **.rnpn**. Searches run against the Amino Acid Pending database produce two sets of results, with the extensions, **.rapm** and **.rapn**.

The Pending database search results should not be left in the case because they contain data that is confidential.
